SUBJECT INDEX

Alamethicin in DLPC vesicles
  circular dichroism of 163-164
  orientation circular dichroism in 164-165
Alamethicin in DPhPC vesicles 165-169
  circular dichroism of 166-169
  spectra of 166-169
Ammonia synthesis reactions over iron
  catalysis promotion in 136-137, 138
  non-kinetic catalytic reactions in 124-125
  structural sensitivity in 135-136
Anomalous multiple-wavelength diffraction 187-196
  analysis 191-192
    justification of hypothesis 195-196
    Patterson function of thallium ions 192-195
  measurement with 188-191
    data reduction in 190
    diffraction measurement in 190
    synchroton radiation source in 188
    x-ray absorption spectra and anomalous scattering factor in 189-190
  principle of 187-189

Barium (Ba) adsorption, on graphite monolayer/Ir 335-347
  bonding of island atoms to substrate 340, 342-347
  desorption characteristics 336-337
  growth and dissolution, 2-D islands 337-340, 341

Carbides, surface 366-388
  adsorption on Re 374-377
    benzene on Re (1010) 374-376
    Si on Re (1010) 376
  adsorption on W 367-373
    benzene on (100)W 369
    carbon atom flux on W(100) 367-369
    displacement pattern, physical 371, 373
    hydrocarbons on heated (100)W 373
    Si on (100)W 369, 370-371
  coadsorption, Si and C on Re 370-371, 372
  formation of 366
  Mo carbide 377-387
    benzene on Mo(100) 377, 378, 379, 380, 381, 383-385
    coadsorption of Si, C, S, and C, Si, S atoms on Mo(100) 386-387
    Si and S atoms on Mo(100) 386
    temperature range of SC existence 380, 381, 382, 383
  problem of surface chemical compounds 387-388
Carbon adlayer on transition metals. See also under Graphite islands
  adsorption bonding in graphite islands-metal surface 235-266
  under graphite islands islands 267-286
  benzene/Ir at high temperatures 267-270
  dissolution of islands in adlayer/Ir 270-280
  intercalation, graphite monolayer/Ir 255-263
  on Ir 238-247
  on Ni(111) 247-249

(Carbon adlayer, cont.)
on Pt(111) 252-254, 285-286
quantum-chemical description of 263-266
on Re 249-252
on Rh 280-285
clusters and atoms, adsorbed 389-401
atom-He/Pt(111) interaction 400-401
in C dissolution in Re(1010) 390-396
formalism for formation and decay 397-400
in Ir(111) with surface C 396
first-order phase transition in 205-234
adsorption on Ir at T ≤ 1200 K 231-233
growth kinetics of graphite island area in 225-231
on Ir 211-225
on Ni(111) 233-234
specific features of 205-207
TEESI investigation of 207-211
phase equilibrium in 287-295
adsorption on Ir 291-294
C flows in adlayer 290-291
determination of $O_{eq}(T)$, C/Ir 287-290
study of 294-295
physico-chemical processes, SC/metals 296-366
adsorption, desorption, migration of particles 335-364
dissociative catalysis 296-312
effect on work function 364-365
graphitization 313-323
investigation by CsCl dissociation 323-335
surface metal carbides 366-388
formation of 366
Mo 377-387
Rh 373-377, 3778
surface chemical compounds problem 387-388

(Carbon adlayer)
W 367-373
transport of surface C 402-412
desorption of 402-405
diffusion in 407-409, 411-412
growth mechanism multilayer graphite film/-solid solution C in metal 412-418
migration on Ir 406-407
Carbon clusters and atoms, adsorbed 389-401
C atoms, with He/Pt(111) 400-401
in C dissolution in Re(1010) 390-396
activation energies in 392, 394, 395, 396
Auger peak intensities 390, 393
experimental idea 390
kinetics of dissolution 390, 391
temperature in 390, 391 392-394
formalism, cluster formation and decay 397-400
in Ir(111) with SC 396, 397
Carbon transport. See Transport of surface carbon (SC)
Catalysis
electronic factors in 104-138
activity trends in 130-136
chemisorption on metals 106-124
micro-kinetic models, catalytic reactions 124-129
Catalysis of surface carbon metal
dissociative 296-312
CsCl molecules/carbon-coated Ir surface 297-299, 300
CsCl molecules/Rh and Re with SC 299, 301, 302
HCOOK, KNO_3, K_2,Kc,Kcl, RbCl,C_6,H_6, 301-302, 303
of HCOOK molecules/C-coated Ir 302, 303

(Catalysis...dissociative...)
of HCOOK molecules/
C-coated Ni(110)
304-305
micro-kinetic models of
124-129
studies of SC effect on
305-312
C poisoning of metal
catalysts 310-312
CO hydrogenation on
Fe(110) 306
CO hydrogenation on
Ni(100) 306
CO hydrogenation on Pd 307
graphite poisoning and
305-306
in Re 307
surface Re carbide in
308-310, 311
Catalytic activity
trends in 130-136
from ammonia synthesis
reaction/Fe 130-132
from one metal to next
130-135
structural sensitivity
135-136
transition metal sulphides
for hydrodesulpuriza-
tion 132-135
Catalytic reactions
micro-kinetic models of
adsorbate-adsorbate inter-
actions in 128, 129
ammonia synthesis reaction
over Fe 124-125, 131
CO oxidation in auto
exhaust 125-127
time and position variable
in 128
promotion of 136-137
CB (circular birefringence)
CD (circular dichroism)
Cesium chlorine (CsCl) mole-
cule adsorption
355-364
experimental conditions 355,
356, 357-358, 359
graphite monolayer/Ir
348-355
kinetics of 2-D salt island
358, 359, 360, 361
migration: Cs, Ba 362-364
Chemical reactions, surface
in molecular beam
scattering 86-89
Chemisorption. See also Dis-
sociative chemisorp-
tion
desorption and
incident angle dependence
of 52, 54
incident translational
energy dependence of
51-52, 53, 55
precursor role in 52, 56,
57
rotational alignment in 58
rotational state distribu-
tion for 57-58
steric effects in chemisorp-
tion 57
dissociative, 60-80
collision-induced 86
direct collisional activa-
tion dependencies in
60-80
precursor-mediated depend-
encies in 80-86
products of, identification
and manipulation of
78-80
experimental observations of
106-110
atomic energies in 107-108
molecular energies in
108-110
trends in 113-124
adsorbate-adsorbate inter-
actions 118-121
effective medium theory
113
face dependence of inter-
action energies
115-117

Dissociation, CsCl method
CsCl molecule energetics and
325-329
in free space 325
at graphite monolayer
defects 327-328, 329
on graphite/monolayer/Ir
326
on metal surface 325
interaction: molecule-defect
on graphite monolayer
329, 330-335
alkali metal atoms 331

(Dissociation...,cont.)
Ba atoms and islands 331, 333-334
C atoms and clusters 329, 330-332
Pt atoms and islands 334-335
of molecules on defect-free graphite monolayer 323-324
Dissociative chemisorption
direct collisional activation dependencies in
incident angle 67-71
incident rotational energy 77-78
incident translational energy 60-67
surface incident vibrational energy 71-77
surface temperature 71
precursor-mediated dependencies 80-86
collision-induced 86
incident angle 80-81
incident translational energy 80
incident vibrational energy 81
pathways in 84-86
surface coverage 82, 84
surface temperature 81-82
DLPC (dilauroylphosphatidylcholine). See under Alamethicin
DPhPc (dophytanoylphospatidylcholine). See under Alamethicin

Elastic scattering. See also Thermal energy atom scattering
non-reactive 18-25
applications of 18-19
diffractive selective adsorption in 20
in surface structure studies 19-20
TEAS in 21-25

Gramicidin in DLPC multilayers

data reduction of 174-175
x-ray diffraction of 171-173
Graphite island
adsorption under 267-286
benzene/Ir 267-270
dissolution of, in adlayer/Ir 270-280
on Pt(111) 285-286
on Rh 280-285
formation of, on metal surface 263-266
growth kinetics in area of
benzene adsorption 228-231
C adsorption 226-229
Graphite island adsorption bonding
on Ir 238-247. See also Iridium (Ir), carbon adlayer on
on Ni(111) 247-249
on Pt(111) 252-254
quantum-chemical description of 263-266
on Rh 249-252
Graphitization of surface carbon 313-321
detection of surface graphite/Ir 313-324
of C on graphite monolayer/Ir 318-319
of C on Ir 316, 317, 318
of C on Ir, high temperature benzene adsorption 319, 321
from change of C Auger spectrum 313-314, 315
from shape TD spectrum, SC adsorption-induced 314, 316
from work function 316
mechanism of 321-322
study, SC Auger spectrum shape 322-323
in graphite island growth 323

Inelastic scattering, non-reactive 25-42. See also named type
multi-phonon 28-42
single-phonon 26-28
zero-phonon 25-26
Iridium (Ir), carbon adlayer on
adsorption bonding of graphite islands on 236-266
C adlayer on 211-225

(Iridium (Ir), carbon... cont.)
C clusters in 396
C migration on 406-407
benzene adsorption on 228-231, 267-270
determination of $O_{eq}(T)$ 287-290
dissolution of graphite islands in 270-280
first-order phase transition 211-225
adsorption at T ≤ 1200 K 231-233
experiment in 214
graphite islands thickness 223-225
isotherms for, current 214-218
study motivation 211-214
structure of carbon islands in adlayer 218-222
formation of, in C adsorption 291-292, 293, 403-404. 405
graphite islands on 235-266
graphite phase 238-247
concept 238
experimental 238-240
K adsorption, with graphite islands 244-246
K atom adsorption on graphite monolayer 240-243
thermal desorption phase 242, 243-244, 245
growth kinetics of graphite island area 225-231
benzene adsorption, high-temperature 228-231
carbon adsorption, high-temperature 226-229
intercalation of graphite monolayer on, Si, Pt atoms 255-263
phase equilibrium 287-291

LB (linear birefringence)
LD (linear dichroism)

Membrane active peptides, in bilayers. See Membrane studies
Membrane diffraction 169-186
gramicidin in DLPC multilayers 171-186

graphite phase on 247-249

(Nickel [Ni] (111), cont.)
phase transition in C adlayer on 233-234
Nozzle beams
characteristics of
internal state distribution 9-10
pulsed 10
seeding techniques 9
velocity distribution 8-9

OCD. See Oriented circular dichroism
Oriented circular dichroism (OCD)
alamethicin embedded in membrane 163-165
data analysis of 165-169
applications of
for helices 152
for non-helical molecules 151-152
linear dichroism and birefringence effect on
baseline CD signal in 154-155
CD spectrometer calculation in 152-154
LD_1+LB+CD+LD_2 158-160
linear and circular dichroism and CB 152-160
sample chamber and measurements 161-163
theory of 149-150
Particles on metals with surface carbon
Ba adsorption on graphite monolayer/Ir 335-347
CsCl molecule adsorption on graphite monolayer/Ir 355-361
Pt/graphite monolayer/Ir 348-355
Phase equilibrium
C adsorption on Ir 291-294
adlayer formation in 291-292
phase transition visualization 292-294
carbon flows in adlayer near graphite island edge 290-291
determination of $O_{eq}(T)$, C adlayer/Ir 287-295
(Phase equilibrium..., cont.)
by graphite island dissolution 287-288, 289
by phase transition onset 288, 289, 290
study of 294-295
Platinum (Pt)
adsorption on graphite monolayer/Ir 348-355
atom concentration on island surface 354-355 356
growth kinetics 348-351, 353
island concentration, evaluation 352-354
island dissolution kinetics 351-352, 353
techniques 348
Platinum [Pt] (111)
carbon adlayer on, C state under graphite islands in 285-286
C atom-He interaction on 400-401
graphite phase on 252-254

Reactive scattering
chemical reactions at surfaces in 86-89
dissociative chemisorption in 58-86
direct collisional activation 60-80
precursor-mediated dissociation 80-86
Rhenium (Re)
carbon adlayer on 249-252
coadsorption, Si and C 370-371, 372
Rhenium (Re) carbide 374
Rhenium [Re] (1010)
C clusters in C dissolution in 390-396
Rhodium (Rh)
adlayer on, C state under graphite islands in 280-285
graphite island adsorption on 249-252
Rhodium (Rh) carbide, on transition metals 374-377, 378

SC (surface carbon)
Scattering
  chemisorption and desorption in, molecular 51-58
  non-reactive 17-58
    elastic 18-25
    inelastic 25-42
  reactive 58-89
    dissociative chemisorption in 58-86
    surface chemical reactions in 86-89
  trapping and adsorption in 42-51
Scattering chamber, ultra-high vacuum. See Ultra-high vacuum scattering chamber
Single-phonon inelastic scattering 26-29
  of He 27-28, 29
Swelling method diffraction 175-176, 179
  electron density profile in 177-185
    differences in 179-181, 183-184
    normalized with Ba and Mg acetates 182-183
    normalized with Tl+ and K+ 178-179
    results 184-185
    total electrons, one unit cell lamellar spacing 177-178

TEAS. See Thermal energy atom scattering
TEESI. See Thermoelectron emission and surface ionization investigation
Thermal energy atom scattering (TEAS)
  elastic 16-25
    in 2-D phase transition investigation 25
    in adsorbate migration investigation 24-25
    in defect density scattering 21-22
    in surface coverage monitoring 21, 23-24
    in ultra-high vacuum scattering chamber 16-17
Thermoelectron emission and surface ionization (TEESI) investigation
  of phase transitions, in adlayers 207-211
    in single-phase surface 208-209
    theory of 207-208
    in two-phase surface 209-211
  requirements for 211
Transport of surface carbon
  desorption of 402-405
    C/Ir(111) 403-405
    from double-phase adlayer/Ir 405
  by diffusion
    of double phase adlayer and metal bulk 409, 411-412
    of single-phase adlayer and metal bulk 407-409, 410
  growth mechanism, multilayer graphite film/solid solution C in metal 412-418
    concept-experiment comparison 417-418
    conditions for 415, 416, 417, 418
    confirmation of 415, 416
    schematic of 413, 414-415
  migration on Ir 406-407
Trapping-adsorption, molecular beam scattering 42-51
  precursor adsorption in
    detailed balance in 50
    dynamics of extrinsic 48-49
    orientation of molecular axis in desorption 51
    rotational state distribution in 50-51
  trapping dependence in
    on adsorbate coverage 48-49
    on incident angle 45-47
    on incident translational energy 43-44
    on molecular orientation, initial 47
    on surface temperature 47
Tungsten (W) carbide, on transition metal 367-373

Ultra-high vacuum scattering chamber
  adsorption dynamics in 15-16
  scattering and desorption dynamics in 13-15
  thermal energy atom scattering in 16-17

Zero-phonon inelastic scattering 25-26
